A Mayfly  
*Asioplax edmundsi*

Insecta — Ephemeroptera — Leptohyphidae

**CONSERVATION STATUS / CLASSIFICATION**
- Rangewide: Vulnerable (G3)
- Statewide: Critically imperiled (S1)
- ESA: No status
- USFS: Region 1: No status; Region 4: No status
- BLM: No status
- IDFG: Not classified

**BASIS FOR INCLUSION**
Lack of essential information pertaining to status; 1 known location in Idaho.

**TAXONOMY**
The species was formerly included in the genus *Tricorythodes*. The genus *Asioplax* was erected in 2000 (Wiersema and McCafferty 2000).

**DISTRIBUTION AND ABUNDANCE**
This species occurs in Colorado, Idaho, Utah, and Alberta. The Idaho distribution is limited to a single location in the vicinity of Canyon and Ada counties.

**POPULATION TREND**
Population trend is not known.

**HABITAT AND ECOLOGY**
Lester et al. (2002) summarized habitat as follows: “This species appears to be limited to low-gradient streams and rivers in the Snake River Plain in Idaho. Typical of the genus *Asioplax* throughout the Southwest and Mexico, it appears tolerant of high sediment levels and warm summer temperatures.”

**ISSUES**
Specific threats to Idaho populations have not been identified. In general, mayfly populations are affected by changes to aquatic habitat, such as alteration of flow patterns, streambed substrate, thermal characteristics, and water quality. Alteration and degradation of aquatic habitat is the primary concern for Idaho populations.

**RECOMMENDED ACTIONS**
The single collection in Idaho is quite recent: 1998. Additional surveys should be conducted to better define the distribution and status of populations.
A Mayfly

Asioplax edmundsi
