

# Hunting in Units 14 and 18

Game management units 14 and 18 are in a CWD Management Zone, where hunters are required to have their harvested mule deer or white-tailed deer tested for chronic wasting disease.

## What you need to know

- ⊕ Whole carcasses of harvested deer, elk, and moose may not be transported out of a CWD Management Zone.
- ⊕ Animals must be quartered with spine left in the field (tail and evidence of sex attached to quarters). Head should remain in the field if lymph nodes have been removed for CWD testing.
- ⊕ All heads removed from the kill site must be brought to IDFG for CWD sampling.
- ⊕ Lymph node samples and heads can be dropped off at designated locations.
- ⊕ Samples must be submitted within 10 days of harvest.
- ⊕ IDFG staff are available to collect samples and heads at any IDFG Regional Office or check station.
- ⊕ Hunters may keep antlers, but heads will not be returned to hunters after sampling.
- ⊕ Dumpsters are available to properly dispose of inedible remains of deer, elk and moose after butchering.

# CWD Sampling Requirements

All mule deer and white-tailed deer harvested in game management units 14 and 18 must be tested for chronic wasting disease.

## Submitting a sample

Begin by writing your name, tag number and hunt information on the sample bag label. NOTE: Please write legibly with pen or pencil.

Age the animal as a fawn, yearling or adult and write it on the sample bag label.

Collect lymph nodes from the harvested animal.

Seal bag securely and drop off sample at an IDFG regional office or drop-off location.

Retain card with barcode sticker so you can check your results at a later date.
