STOP AQUATIC HITCHHIKERS™

Prevent the transport of nuisance species. Clean all recreational equipment.
Anglers love Yellowstone Cutthroat Trout for their eagerness to take flies and the unique chance to catch large, native trout in some of Idaho’s most iconic rivers. However, non-native Rainbow Trout pose a major threat to the future of Yellowstone Cutthroat Trout. Non-native Rainbow Trout not only compete with Yellowstone Cutthroat Trout, but also interbreed with them, producing hybrids that continue to interbreed with cutthroat. IDFG uses fish traps on South Fork tributaries to prevent Rainbow Trout from spawning in important Yellowstone Cutthroat streams. Through regulations, IDFG encourages anglers to harvest unlimited amounts of Rainbow Trout and hybrids in both the South Fork Snake and Teton rivers. Also, South Fork anglers can participate in an incentive reward program and have a chance to earn between $50 and $1,000 per fish head turned-in. In the South Fork, Rainbow Trout and hybrids are uniquely marked with microscopic tags in the snout of hundreds of Rainbow Trout and hybrids annually. Return a fish head and you may earn a reward. By harvesting Rainbow Trout and hybrids, anglers like you can help protect Yellowstone Cutthroat Trout populations and these unique angling opportunities for generations to come. So enjoy a shore lunch, or take some Rainbow Trout home for dinner – you’ll be doing the South Fork Snake and Teton cutthroat a favor!

Yellowstone Cutthroat/Rainbow Trout Hybrids colors and markings can include a wide range of marks from both pure Rainbow Trout and Yellowstone Cutthroat Trout. They are most easily identified by the presence of white fin tips.
