### WHITE-FRONTED GOOSE

## DON'T SHOOT Native Swans are Protected!

Two species of swans are found in Idaho: tundra swans and trumpeter swans. Both are protected and cannot be hunted in Idaho.

These slow, low-flying birds are vulnerable to accidental and illegal shooting. Because they are larger with longer necks and adult birds are completely white, swans do not closely resemble any legal game bird.

Trumpeters have a seven-foot wingspan and weigh up to 30 pounds. Young swans (cygnets), are a medium gray color with paler belly and wing linings, and smaller than the adults. These large swans fly with a slow, distinct wing beat.

Snow geese and Ross's geese are also white, but are much smaller and have black wing tips.

**Hunters Must Be Sure of Their Targets!**

Report all sightings of swans with neck collars to the nearest IDFG office. (See page 4)
