New for 2022

Chronic wasting disease testing is required for deer, elk, and moose harvested in Units 14 and 15. See idfg.idaho.gov/cwd for instructions and additional information.

Should I get my deer, elk or moose tested for CWD if I didn’t harvest in Units 14 or 15?

• Yes, if you harvest in a unit adjacent to Units 14 or 15.
• Yes, if you harvest a deer, elk, or moose in any unit that borders Montana, Wyoming, or Utah.
• Yes, if you harvest in a unit included in the 2022 rotation strategy for CWD sampling. See idfg.idaho.gov/cwd/sampling for a map of units or contact a regional office.
• Yes, if you hunt in any other units and are concerned about whether your deer, elk, or moose may be infected with CWD.

Transporting game from CWD areas

It is unlawful to transport certain parts of deer, elk, or moose outside a designated CWD management zone (currently Units 14 and 15). It is also unlawful to import into Idaho certain animal parts from other states, provinces, and countries with CWD. See idfg.idaho.gov/cwd/rules for details.
